

Spider uses nanotechnology to deactivate pathogenic DNA

Kills important asthma triggers

Saves energy by mixing the air 24/7/365

Provides One Health¹ support to humans and animals

Provides increased safety for the immunocomprised

Pathogens survive and thrive ONLY where allowed

Washes the air

Is GREEN

Dilutes carbon dioxide CO₂

Kills airborne and surface pathogens

IoT Global connectivity to anywhere-anytime

Boosts the efficiencies of installed UV systems

Chart of HAIs

¹ There are many examples that show how the health of people is related to the health of animals and the environment. For instance, some diseases can be shared between animals and people. These diseases are known as [zoonotic diseases](#).
